

The background of the image shows a construction site at sunset. Silhouettes of workers in hard hats and safety gear are visible in the foreground. A large crane is positioned in the middle ground, and a worker is seen on a platform or scaffolding in the upper right corner. The sky is a mix of dark blue and orange from the setting sun.

# IMPROVED EFFICIENCY THROUGH PROJECT COLLABORATION

*Industry: Construction*

*Solution: Project Collaboration*

## **Business Challenge**

The client, a leading architectural firm wanted to get a technology solution in place quickly, to facilitate the communication process and to manage all information centrally. They were looking for a Project Collaboration system to manage their growing construction business. In an architectural firm, it is essential that information is communicated in a timely way and that everyone is kept up to date and consistently works with the most recent plans. Furthermore, the team are faced with the challenge of coordinating queries and responses across multiple parties in multiple locations. Hence it was important to find an intuitive solution that did not require a significant IT investment and one that would be easy to use with a minimum requirement for training.

## **How we helped**

Bizessence partnered with the client in designing and implementing a Project Collaboration system that helped them in implementing effective chains of communication through delegating tasks, sharing files, coordinating group discussions etc.

## **Impact**

The system improved and streamlined the internal processes throughout the project lifecycle right from project request, scheduling and final implementation. It improved visibility, control and problem diagnosis in the various phases of the project. The solution also provided greater grip on project budgets through efficient project management features of task setting, priority setting and efficient management of project documentation.
